

SYLLABUS

1. Information regarding the programme

1.1 Higher education institution	Babeş-Bolyai University Cluj-Napoca
1.2 Faculty	Chemistry and Chemical Engineering
1.3 Department	Chemical Engineering
1.4 Field of study	Interdisciplinary (Chemistry and Chemical Engineering)
1.5 Study cycle	Master
1.6 Study programme / Qualification	Food Control and Processing / Master's Degree

2. Information regarding the discipline

2.1 Name of the discipline	Rheology of disperse systems - CMX7312						
2.2 Course coordinator	Conf. Adina GHIRIŞAN						
2.3 Seminar coordinator	Conf. Adina GHIRIŞAN						
2.4 Year of study	I	2.5 Semester	1	2.6. Type of evaluation	C	2.7 Type of discipline	Op

3. Total estimated time (hours/semester of didactic activities)

3.1 Hours per week	3	Of which: 3.2 curs	2	3.3 seminar/laboratory	1
3.4 Total hours in the curriculum	42	Of which: 3.5 curs	28	3.6 seminar/laboratory	14
Time allotment:					ore
Learning using manual, course support, bibliography, course notes					36
Additional documentation (in libraries, on electronic platforms, field documentation)					32
Preparation for seminars/labs, homework, papers, portfolios and essays					32
Tutorship					4
Evaluations					4
Other activities:					
3.7 Total individual study hours		108			
3.8 Total hours per semester		150			
3.9 Number of ECTS credits		6			

4. Prerequisites (if necessary)

4.1. curriculum	<ul style="list-style-type: none"> Not necessary
4.2. competencies	<ul style="list-style-type: none"> Not necessary

5. Conditions (if necessary)

5.1. for the course	Students will be present at lectures, seminars and laboratories with phones turned off.
5.2. for the seminar /lab activities	<ul style="list-style-type: none"> Students will be present at the laboratories with the paper written and studied. Students will be present at the laboratories with the robe. Students may not leave operating apparatus. Laboratory reports will be done no later than the last week of the teaching activity. Delay will be penalized.

6. Specific competencies acquired

Professional competencies	<p>Development of processes, machines and equipment specific to the process engineering by promoting new solutions to improve processes, optimal operation and control</p> <ul style="list-style-type: none"> • Use of creative expertise, methods and concepts for analysis and synthesis of new chemical processes. • Use of integrated chemical analysis and synthesis for process development and production of innovative products. • Application of performance evaluation of new modern facilities to improve the decision concerning processes and synthesis.
Transversal competencies	<ul style="list-style-type: none"> • Realization of tasks according to the demands and in require terms, with the respect of the ethical professional norms • Solving the tasks according to the general objective established in the work group • Permanent information and documentation in the field.

7. Objectives of the discipline (outcome of the acquired competencies)

7.1 General objective	<ul style="list-style-type: none"> • Knowledge of principles, methods and mechanisms of the bodies' behavior (fluids, solids) subjected to flow/distortion which appears during the real industrial processes.
7.2 Specific objectives	<ul style="list-style-type: none"> • The ability to establish and to choose the models proper to the studied properties of materials, applying the correct research methods.

8. Content

8.1 Course	Teaching methods	Remarks
Introduction. Fundamental concepts of rheology. Specific deformation, shear stress, shear rate. Flow behavior and viscosity. Elasticity.	Interactive lecture	1 lecture, 2 hours
Systems with uniform properties Linear rheological behavior of fluids with uniform properties (Newton's fluid, Hook's solid and St. Vanant's plastic). Model functions for systems with ideal behavior.	Interactive lecture	1 lecture, 2 hours
Viscous fluids with non-Newtonian time-independent behavior Fluids with time-independent structure (shear-thinning or pseudo-plastic flow behavior, shear-thickening or dilatants flow behavior). Rheological model functions, specific flow curves and viscosity functions. Yield point. Determination of the yield point.	Interactive lecture	2 lectures, 4 hours
Viscous fluids with non-Newtonian time-dependent	Interactive lecture	2 lectures, 4 hours

behavior Time-dependent fluid flow behavior (thixotropic and rheopexic fluids). Rheological model functions, specific flow curves and viscosity functions. Structural decomposition and regeneration. Test methods for investigating thixotropy and rheopexy.		
Materials with multiple properties Viscoelastic behavior. Basic principles. Theoretical and mechanical models: Maxwell, Voigt-Kelvin, Lethersich, Zener. Examples of the behavior of viscoelastic liquids and solids in practice.	Interactive lecture	2 lectures, 4 hours
Rheology of liquid systems Rheology behavior of solutions, colloids, emulsions, suspensions and pastes: influence of solid concentration, shape, size and distribution of disperse phase, influence of mechanical and hydrodynamic effects on the rheological behavior. Electro-viscous effect. Analysis methods.	Interactive lecture	3 lectures, 6 hours
Rheometry. Rheological measurements in static and dynamic regime. Rotational and oscillatory rheometers. Measuring systems and tests. Creep tests. Relaxation tests.	Interactive lecture	3 lectures, 6 hours
Bibliography <ol style="list-style-type: none"> 1. R. Z. Tudose, T. Volintiru, N. Asandei, M. Lungu, E. Merică și Gh. Ivan, „Reologia compușilor macromoleculari, I. Introducere în reologie”, Ed. 8.2 Seminars / laboratory work	Teaching methods	Remarks
Viscosity. Influence of thermodynamic parameters on	Problems	2 hours

viscosity of liquid systems. Fitting functions for temperature-dependent viscosity curves. Determination of activation energy for the fluids' flow.	Discussions Analysis	
Experimental determination of fluids viscosity using different types of rotational rheometers (Hoeppler, Visco-Star, Brookfield).	Experimental tests Discussions Interpretation	2 hours
Determination of specific flow curves and viscosity curves for different Newtonian and non-Newtonian fluids by the rotational rheometer Rheotest 2.	Experimental tests Discussions Interpretation	4 hours
Rheological behavior of slips and ceramic pastes. Influence of solid concentration.	Problems Discussions	2 hours
Rheological behavior of viscoelastic systems. Interpretation of oscillatory tests.	Problems Discussions	2 hours
Colloquium

9. Corroborating the content of the discipline with the expectations of the epistemic community, professional associations and representative employers within the field of the program

- To establish the formative content of the course and laboratory work teaching and research personal from chemistry and chemical engineering departments from our faculty and from other universities have been invited.

10. Evaluation

Type of activity	10.1 Evaluation criteria	10.2 Evaluation methods	10.3 Share in the grade (%)
10.4 Course	The capacity to understand the relevance of Rheology in Materials Science and Engineering and to apply the knowledge gained in solving real-world engineering problems.	The presence to colloquium depends on participation to the laboratory work and on the quality of reports. The exam is oral. It will assess thinking, reliability and replies argument.	60 %
	The ability to establish and to choose the models		

	proper to the studied properties of materials, applying the correct research methods.		
10.5 Seminar/lab activities	Capacity to analyze the theoretical and experimental models proper to describe the rheological behavior of bodies/fluids in real applications.	The reports of the lab work will be done no later than the last week of the teaching activity.	40 %
	The activity during the lab work and the quality of reports.		
10.6 Minimum performance standards			
<ul style="list-style-type: none">• 6 (six) in lab and examination according to the standard.
