

## SYLLABUS

### 1. Information regarding the programme

1.1 Higher education institution	University "Babeş-Bolyai" Cluj-Napoca
1.2 Faculty	Chemistry and Chemical Engineering
1.3 Department	Chemical Engineering
1.4 Field of study	Chemical Engineering
1.5 Study cycle	master
1.6 Study programme / Qualification	Advanced Chemical Process Engineering

### 2. Information regarding the discipline

2.1 Name of the discipline	Process Design using Specific Software – CME7311						
2.2 Course coordinator	Conf. dr. ing. Imre-Lucaci Árpád						
2.3 Seminar coordinator	Conf. dr. ing. Imre-Lucaci Árpád						
2.4. Year of study	I	2.5 Semester	1	2.6. Type of evaluation	C	2.7 Type of discipline	Ob

### 3. Total estimated time (hours/semester of didactic activities)

3.1 Hours per week	3	Of which: 3.2 course	2	3.3 seminar/laboratory	1
3.4 Total hours in the curriculum	42	Of which: 3.5 course	28	3.6 seminar/laboratory	14
Time allotment:					hours
Learning using manual, course support, bibliography, course notes					14
Additional documentation (in libraries, on electronic platforms, field documentation)					28
Preparation for seminars/labs, homework, papers, portfolios and essays					50
Tutorship					8
Evaluations					8
Other activities: .....					-
3.7 Total individual study hours	108				
3.8 Total hours per semester	150				
3.9 Number of ECTS credits	6				

### 4. Prerequisites (if necessary)

4.1. curriculum	• not necessary
4.2. competencies	• not necessary

### 5. Conditions (if necessary)

5.1. for the course	• no conditions
5.2. for the seminar/lab activities	• no conditions

### 6. Specific competencies acquired

<b>Professional competencies</b>	<ul style="list-style-type: none"> <li>Defining language and identify advanced concepts of design of processes, equipments and devices in process industries as well as the fundamental tools of computer aided design (CAD)</li> <li>Use of extensive design knowledge for explanation and interpretation of technological design solutions of processes, equipments and devices in a (bio)chemical system by using CAD tools</li> <li>Use of extensive knowledge of design to identify potential solutions for complex design problems of devices and equipments in a (bio)chemical system by using CAD tools</li> <li>Assessment and critical-constructive analysis of processes, devices and equipments based on concepts, theories, models, methods and design practices in order to propose their design solutions</li> <li>Formulation, development and creative elaboration of design solutions for design of processes, devices and equipments for process industries, integrated design based on CAD tools</li> <li>Development of dynamic mathematical models with distributed parameters, their implementation in simulators used in the evaluation of the process performance by identifying operational and management solutions with economical benefits, increased energy efficiency, increased operational safety and low environmental impact</li> </ul>
<b>Transversal competencies</b>	<ul style="list-style-type: none"> <li>Independent execution of complex professional duties and conduct autonomous research and design activities using computer-assisted techniques in compliance with the rules of professional ethics and moral behavior</li> </ul>

## 7. Objectives of the discipline (outcome of the acquired competencies)

7.1 General objective of the discipline	<ul style="list-style-type: none"> <li>Introduction in the use of specific software products for design of processes in process industries.</li> </ul>
7.2 Specific objective of the discipline	<ul style="list-style-type: none"> <li>Ability to design and conduct numerical experiments and to analyze and interpret the data</li> <li>Ability to identify, formulate and solve engineering problems</li> <li>Ability to elaborate statistical and analytical, steady state and dynamic mathematical models, to build and use software simulators which represent the behavior of the real chemical system, in concordance with the goal of the investigation of it</li> <li>Ability to design a system, a component or a process to achieve the necessary conditions</li> <li>Ability to understand and interpret the evolution in space and time of a chemical system, to abstract and represent it in the form of a mathematical model</li> <li>Ability to establish interpersonal relations favorable for team work</li> </ul>

## 8. Content

8.1 Course	Teaching methods	Remarks
1. Importance of mathematical modeling and	Lecture. Explanation.	

simulation of the processes in the chemical industry. Process simulators – general presentation.	Conversation. Description.	
2. Process design. Basic principles. Integrated process design.	Lecture. Explanation. Conversation. Description.	
3. Process synthesis by hierarchical approach.	Lecture. Explanation. Conversation. Description.	
4-6. Reaction process synthesis. Separation process synthesis. Residue Curve Maps - RCM. Distillation Region Diagrams - DRD.	Lecture. Explanation. Conversation. Description. Problem solving.	
7-9. Case studies from the chemical industry solved in CHEMCAD. Vinyl acetate process.	Lecture. Explanation. Conversation. Description. Problem solving.	
10-12. Case studies from the chemical industry solved in AspenPlus. Vinyl acetate process. Acrylonitrile process.	Lecture. Explanation. Conversation. Description. Problem solving.	
13. Case studies solved using PRO/II.	Lecture. Explanation. Conversation. Description. Problem solving.	
14. Environmental regulations. Methods to reduce the pollution by using adequate process design solutions. Examples and case studies. Environmental assessment of processes.	Lecture. Explanation. Conversation. Description. Problem solving.

2. \* \*, *AspenPlus 2006. Getting Started*, AspenTech Inc., U.S.A., 2006
3. \* \*, *PRO/II - User's Guide*, Simsci, U.S.A., 2004
4. *W.L. Luyben*, Plantwide dynamic simulators in chemical processing and control, Marcel Dekker Inc. Publisher, NY, U.S.A., 2002
5. *Dimian A.C., Bâldea C.S.*, Chemical Process Design. Computer-Aided Case Studies, Wiley-VCH, Germany, 2008

8.2 Seminar / laboratory	Teaching methods	Remarks
1. Process simulators – general presentation.	Explanation. Problem solving. Examples solved by using the computer.	
2. Presentation and usage of CHEMCAD process simulator.	Explanation. Problem solving. Examples solved by using the computer.	
3. Presentation and usage of PRO/II process simulator.	Explanation. Problem solving. Examples solved by using the computer.	
4. Presentation and usage of AspenPlus process simulator.	Explanation. Problem solving. Examples solved by using the computer.	
5-7. Case studies from the chemical industry solved by using CHEMCAD, PRO/II și AspenPlus. Vinyl acetate process. Acrylonitrile process.	Explanation. Problem solving. Examples solved by using the computer.

**9. Corroborating the content of the discipline with the expectations of the epistemic community, professional associations and representative employers within the field of the program**

- Students acquire a solid knowledge base by the concepts and theoretical and methodological approach on mainly practical aspects and by using dedicated software in the field, according to partial competences required for occupations listed in Grid 1 - RNCIS.

**10. Evaluation**

Type of activity	10.1 Evaluation criteria	10.2 Evaluation methods	10.3 Share in the grade (%)
10.4 Course	The correctness of the results for the required evaluations.	Individual Project – Mathematical modeling and simulation of a technological process specified by the examiner. Representation and analysis of obtained results.	75 %
	Representation and proper analysis of the results.		
10.5 Seminar/lab activities	The correctness of answers - learning and understanding of issues presented in the seminar / laboratory activities.	Exercises and homeworks using: ChemCAD, PRO/II and Aspen Plus.	25 %
	Work done at the seminar / laboratory.		
10.6 Minimum performance standards			
<ul style="list-style-type: none"> <li>• Attendance at seminar / laboratory in 90% (maximum 1 absence)</li> <li>• Correct identification of the necessary equipments from the unit library of a process simulator for modeling a complex process.</li> </ul>
